

Mifos Mobile Wallet - Review - Signup Process

4 Steps: (1) Sign up -> (2) Verify Phone Number -> (3) Enter Registration Details
-> (4) Passcode Setup

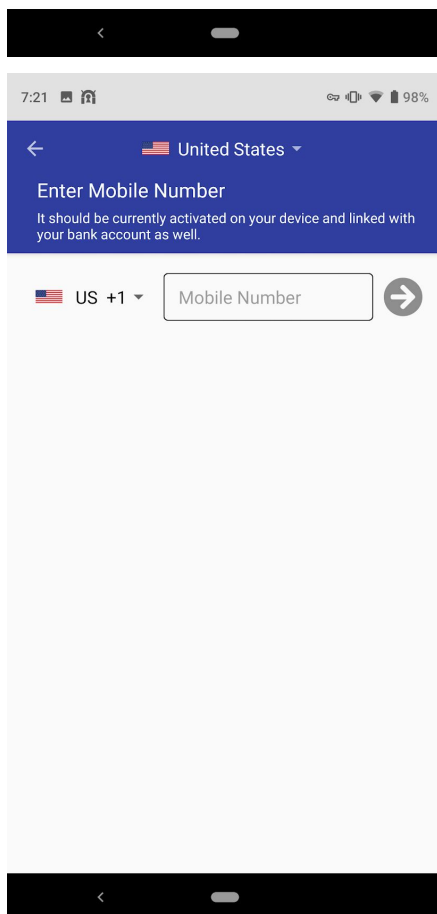

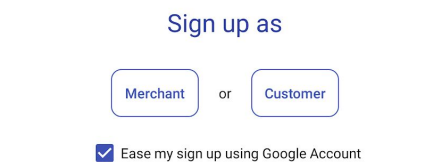

1 - Sign in / sign up page

Bugs: "Ease my sign up using Google account" not working
(still have to fill in details afterwards)

Change suggestions:

- Enlarge hitbox on "create one" button (I tried hitting it 2-4 times to get to the sign up page)
- Make signup easier by using Google account (Eliminate need for step 4)

2 - Phone Number Verification

Bugs: None (OTP not working but I suspect it's because it has yet to be implemented)

Change suggestions:

- Remove country option on top (I did not realise it is there until I had to enter my registration details) and use phone number as country of choice (country code = country of choice)
- Center mobile number text box (screen space seems wasted)
- Add email verification option for the sake of convenience

3 - Enter Registration Details

Bugs: None

Change suggestions:

- Don't make all fields mandatory (Some addresses do not have a second address line)
- Allow for another country (Some people may set up their account with another number that belongs to another country)

4 - Setup passcode

Bugs: None

Change suggestions:

- Enlarge numpad (hitbox too small) or use Android's own numpad

Summary of review:

The interface is clean and simple to use, which makes the signup process easy to comprehend and complete. However, there are some visual quirks and small hindrances (small hitbox in sign up page and passcode numpad, as well as two country choices in step 2) added minor obstacles to an otherwise perfect setup process.
