Sign up page

1. The OTP verification does not happen in either the merchant or the consumer version of the signup portal and the user can easily bypass this step to go to the next page
2. The email is never verified
3. The email address has to be re-entered on the signup page
4. Address is easily taken and not verified with the pincode
   a. Bangalore pincode
   b. Kolkata state
   After using this combination, the user registration was not stopped
5. There is no option to setup a profile image on startup
6. There is no verification to determine whether the user is a merchant or a consumer
7. There is no minimum character value that is used for the address lines and the user can easily put fake addresses
8. There is no verification step that is taken for business names which can be done via a work email address or other method. It is important to avoid fraud
9. There is a quickfill option for the signup with respect to the username and password options wherein the user can select their google password that may have been saved before. This is an issue because it makes signing up extremely easy and the user has no need to actually provide authentic details
10. Despite not using the google sign in option, the google signin option appears for the user while filling out the fields on the next page
11. There is no option to decrypt and view the password that has been entered
12. The user does not know if all fields are mandatory and such information should be provided from the getgo
